

Beach Cleanup Impact Record

Pantai Remis, Jeram, Selangor | 24 June 2026

35

VOLUNTEERS

adult volunteers

35

CLEANUP HOURS

1-hour collection window

4,077

ITEMS RECORDED

itemised field count

50.11 kg

WASTE WEIGHT

23 bags collected

What this record demonstrates

A paper field form, itemised waste counts and event photographs can be transformed into a traceable environmental impact record. This is the first real-world Impact Data Pilot for ESG Starter.

Activity window	08:00 - 10:30
Formal collection window	1 hour
Distance cleaned	1 km
Average per volunteer	116.5 recorded items
Average per bag	177.3 recorded items

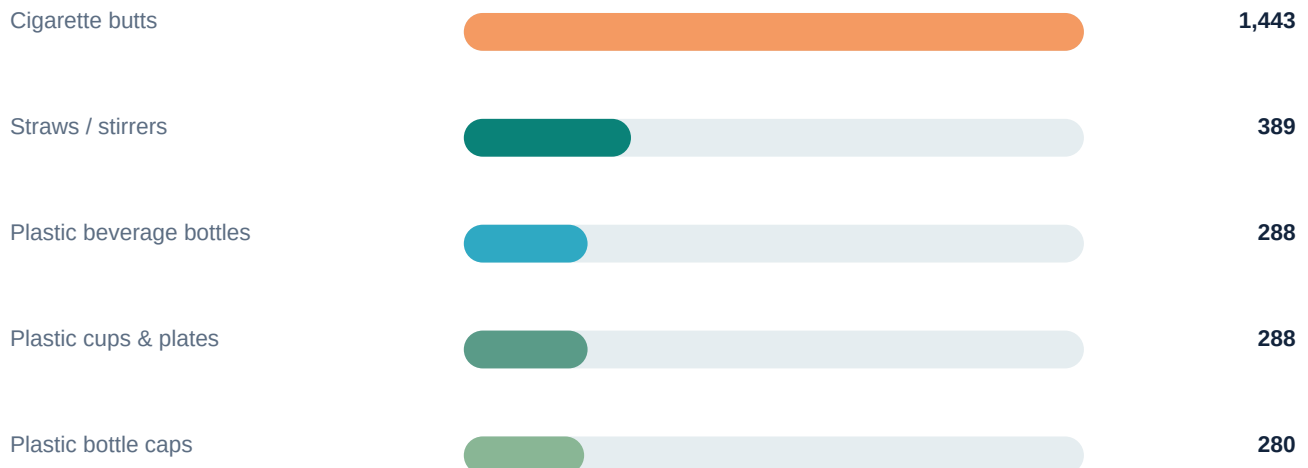

Evidence attached to this record

Itemised Ocean Trash Data Report | Volunteer field forms | Event photographs

What was found

Itemised counts from the supplied Ocean Trash Data Report

Top recorded categories

40.0% conservative plastic / foam share

1,630 items were explicitly labelled plastic or foam in the field record.

This intentionally excludes categories where material type was not explicitly recorded.

Reporting notes

- This report records collected material and field evidence. It does not claim a carbon offset.
- A Plastic Recovery Rate can only be calculated after confirming which materials were recycled or recovered after collection.
- For future events, ESG Starter can capture geolocation, before/after images, QR attendance, collection duration, waste destination and material weights in one digital workflow.

Data source: Ocean Trash Data Report supplied by the event team. Prepared as an ESG Starter Impact Data Pilot record by The Awaken Group Sdn Bhd. Figures are traceable to the supplied source report and should be read as an activity record, not as an independently assured ESG disclosure.
